Subject: RE: getting organized

Dear Hans,
I am currently participating in the following projects:

1) Bioanalytical method development and validation (see MDS' weekly update for details).

2) Review of the JLI sample analysis reports.

3) Review of the literature on new isoprostane markers for free radical induced oxidative stress. !

4) Search of the literature on carbonyl-proteine adducts.

The TES study is the only clinical study that I am involved in at this time.

Best regards,
Shixia

Subject: getting organized

As we are growing we need more rules to be communicated (it does not mean that we did not have them before, but they were used more unconsciously):
Clinical program leaders will set up study teams for all studies running and being planned. They have to assure that all protocols are seen and agreed to by the study team members including the experts from bio-analytics, statistics/DM and smoking behavior, and others as deemed necessary.
The final step for new protocols is a WSA review. Who these reviewers will be has to be decided case by case, normally Rick's staff.
I also like you to put together a list of projects and activities you think you are responsible for. Please send this to me before November 8, so we can discuss it. Please bring the list to the next staff meeting for a first discussion.
Best regards
Hans
